G M Yashas

+91-9019524317 | yashasgm07@gmail.com | LinkedIn | GitHub

Professional Summary

Software Engineer with strong foundations in Data Structures and Algorithms and experience building scalable full-stack applications. Specialized in developing GenAI-driven solutions, including RAG-based systems and Agentic AI applications for processing unstructured data and automating workflows. Proficient in Python, React, and REST APIs, with experience in prompt engineering and building intelligent systems that improve operational efficiency.

Education

Manipal School of Information Science 2025 – Present
Master of Engineering in Computer Science and Engineering *CGPA: 8.12/10*
G M Institute of Technology, VTU 2020 – 2024
Bachelor of Engineering in Computer Science and Engineering *CGPA: 8.2/10*

Experience

Damaka Communication and Collaboration Pvt Ltd. June 2024 – August 2025
Software Engineer

- Developed and maintained scalable web applications including a flight booking platform, food ordering system, and meeting platform modules, supporting real-world users and business operations.
- Designed and implemented RESTful APIs using Node.js and Python, enabling efficient communication between frontend and backend systems and improving system reliability.
- Optimized backend logic and resolved production issues, reducing response time and improving application performance and stability.
- Collaborated with cross-functional teams to deliver business-aligned features while identifying opportunities to automate repetitive workflows, improving system efficiency and reducing manual effort.

Projects

PDF Chatbot using RAG | *Python, LangChain, FAISS, Groq API, Streamlit* | GitHub | Live Demo

- Developed a multi-document PDF chatbot using Retrieval-Augmented Generation (RAG) for context-aware querying over unstructured data. Implemented PDF parsing, text chunking, HuggingFace embeddings, and FAISS-based retrieval, integrated with Groq LLM for fast response generation. Designed a Streamlit interface with multi-file support and source attribution, and deployed the application on cloud for real-time usage.

Agentic AI Leave Management System | *Python, NLP, RESTful APIs, JSON, React* | GitHub

- Developed an Agentic AI-based leave management system leveraging NLP and LLM-driven decision-making to automate workflows. Designed backend APIs in Python for request processing, policy evaluation, and intelligent reasoning, and integrated with a React-based frontend. Applied prompt engineering and rule-based logic to simulate autonomous decision flows, improving efficiency and reducing manual intervention.

End-to-End Data Pipeline for E-Commerce Sales Analytics | *Python, Pandas, MySQL, SQL* | GitHub

- Built a scalable ETL pipeline using Python and Pandas for processing transactional data, including cleaning, transformation, and validation. Designed optimized SQL queries to analyze customer behavior and revenue trends, and applied basic anomaly detection techniques to identify irregular patterns in sales data, enabling data-driven decision-making.

Technical Skills

Programming Languages: Python, JavaScript, SQL
Web & Application Development: HTML, CSS, React, RESTful API Development, Full Stack Development
AI & Machine Learning: NLP, Large Language Models (LLMs), Generative AI, Retrieval-Augmented Generation (RAG), Agentic AI Systems, Prompt Engineering, LangChain, Computer Vision (CNN, YOLO)
Core Computer Science: Data Structures & Algorithms, Object-Oriented Programming (OOP), Operating Systems, DBMS
Tools & Platforms: Git, Linux, Docker (Fundamentals), Power BI

Certifications

Generative AI with Large Language Models (DeepLearning.AI) | PyTorch: Fundamentals (DeepLearning.AI) | Machine Learning with Python (IBM)
